

DOE Former Worker Medical Screening Program

CALIFORNIA

Lawrence Berkeley National Laboratory Former Workers

Population Being Served

Lawrence Berkeley National Laboratory (Berkeley Lab) is located on a site adjacent to the University of California Berkeley campus. The facility was founded in 1931 as a site for physics research on the cyclotron, a circular particle accelerator. Berkeley Lab was involved in production of fissionable bomb material such as plutonium. The lab was also involved with nuclear medicine research. After World War II, the laboratory transitioned to basic research. Currently the Berkeley Lab conducts unclassified research across a wide range of scientific disciplines including chemical and earth sciences, materials sciences, life sciences, human genome, structural biology; accelerator and fusion research, and nuclear science and physics.

Organizations Providing Services

This project is conducted by Boston University and the University of California at San Francisco.

Current Status of the Program

This project will begin medical screening in 2008.

Contact Information

Former Workers from this site who wish to receive screening are asked to call toll free at 1-866-460-0628. Further information may be found at: <http://www.bu.edu/formerworker/>.
